# Microsoft Endpoint Manager {what?}

- Microsoft Endpoint Manager is a single, integrated management platform for managing, protecting, and monitoring all of your organization's endpoints.
- Endpoints include the mobile devices, desktop computers, virtual machines, embedded devices, servers, and shared devices that your organization uses.

# Microsoft Endpoint Manager {why}?

- Protect the data that the people at your organization are accessing.
- Ensure your organization is using proper credentials to access and share company data.
- Safeguard the devices and apps that access your organization resources.
- Ensure that new members of your organization have a great experience on-boarding to your organization.
- Confirm security rules are in place based on your organizations requirements.
- Confirm that every member of your organization has a device that is configured and protected.
- Ensure that all your corporate services are easily available to end users on all the devices they use.
- Ensure that end users get the best possible experience based on first class support for all the products that they need to use.

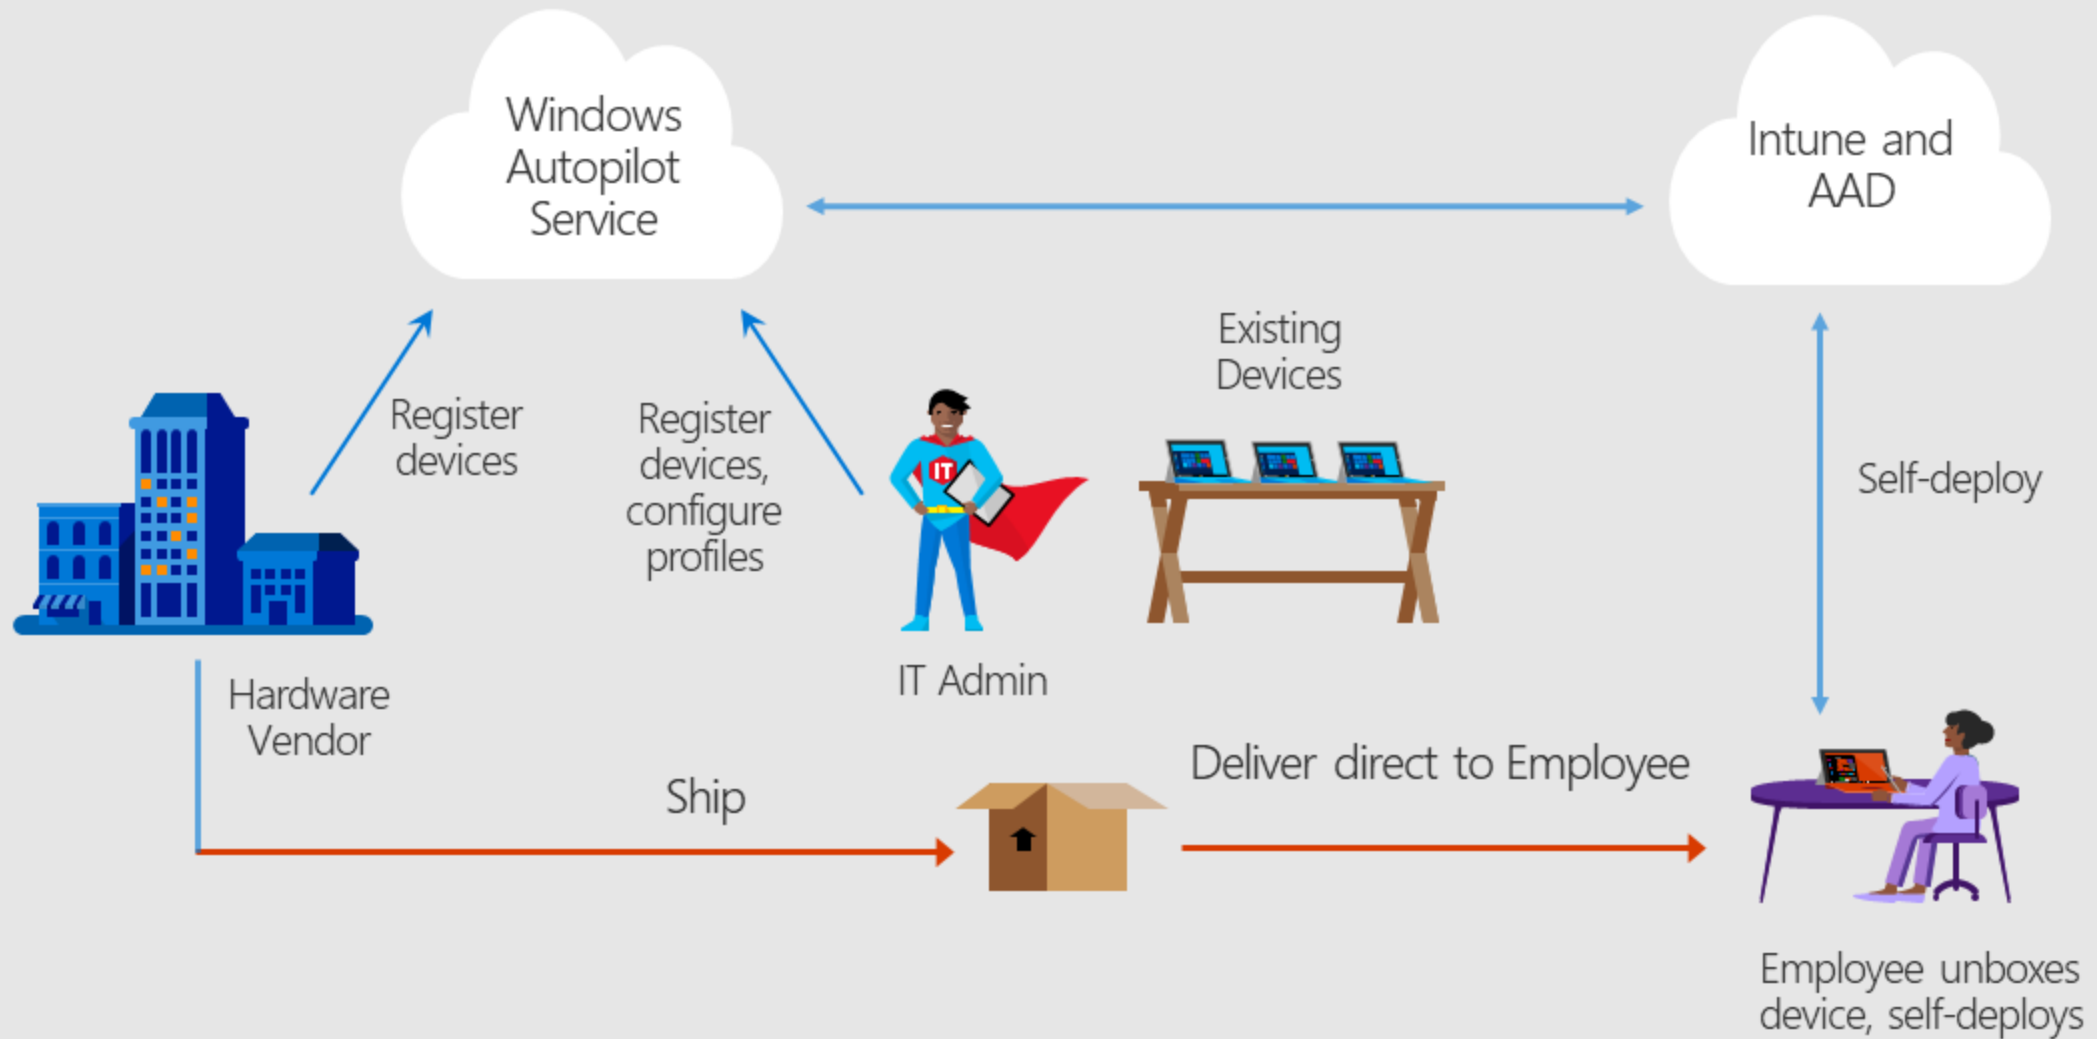

# Microsoft Intune

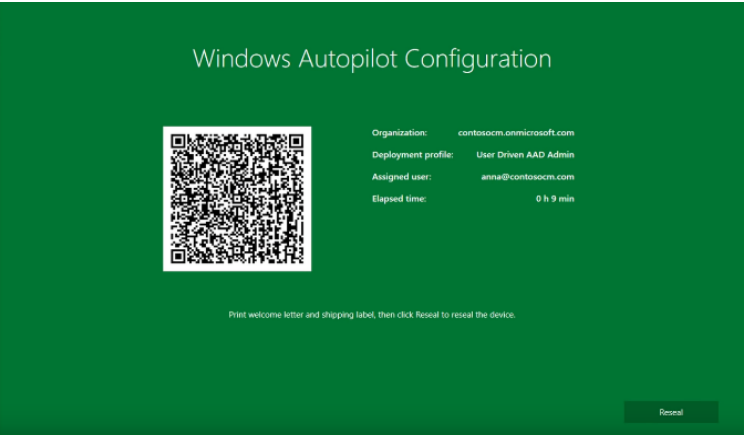

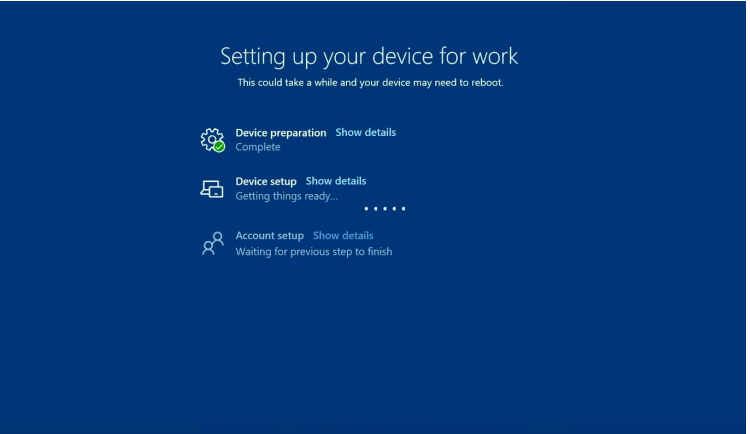

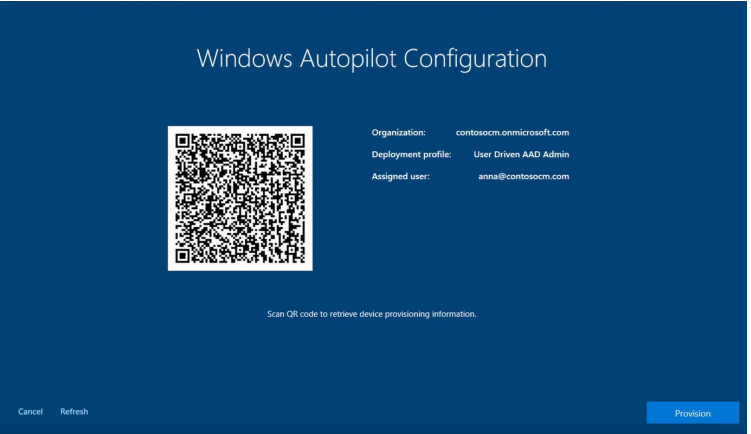

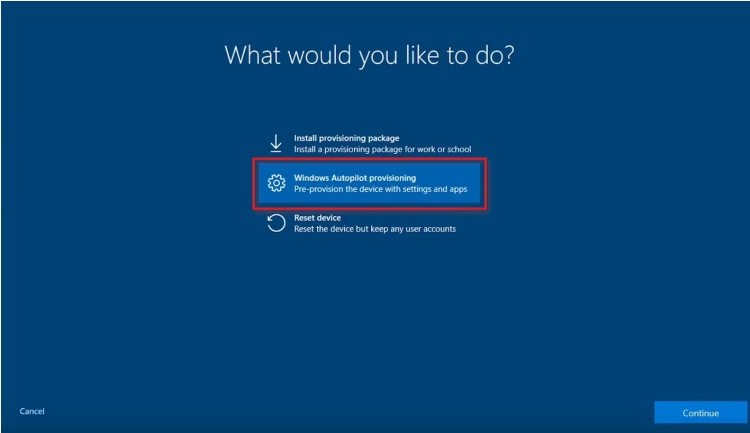

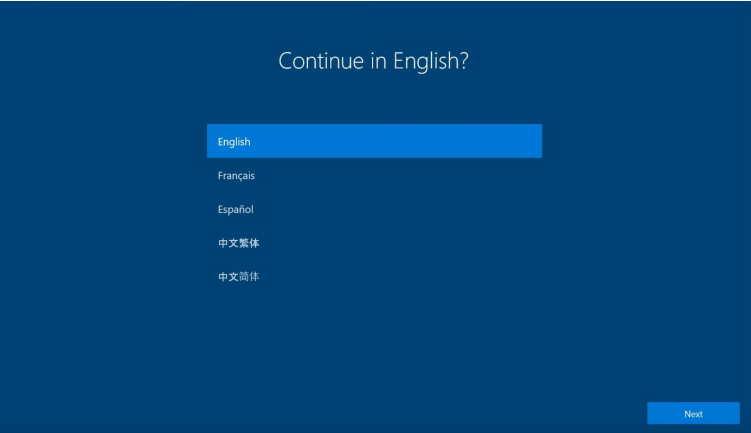

- Microsoft Intune is a cloud-based service that helps enable your workforce to be productive while keeping your corporate data protected.
  - Enroll devices
  - Remotely manage devices
  - Create compliance rules for users and devices
  - Control device features and settings
  - Protect devices and data
  - Manage apps
  - App protection policies

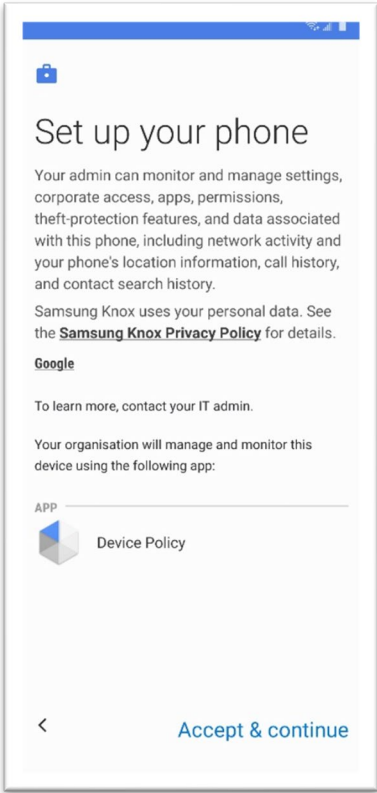

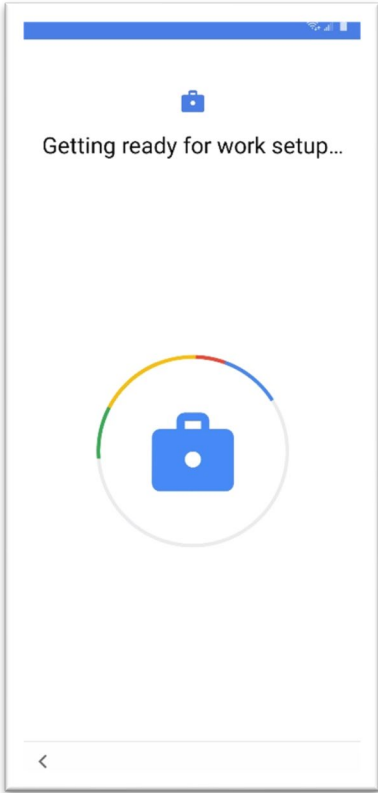

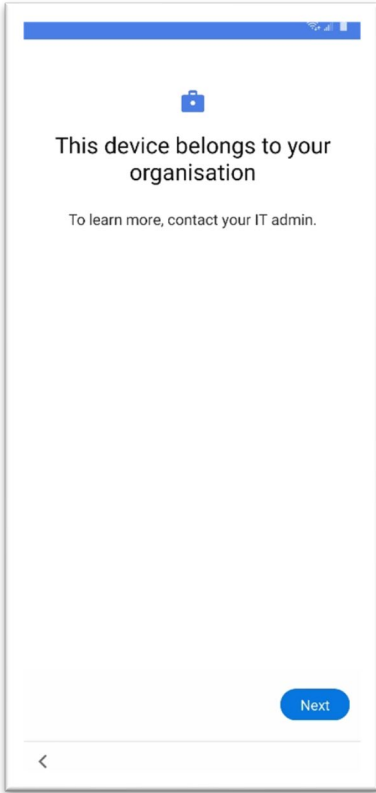

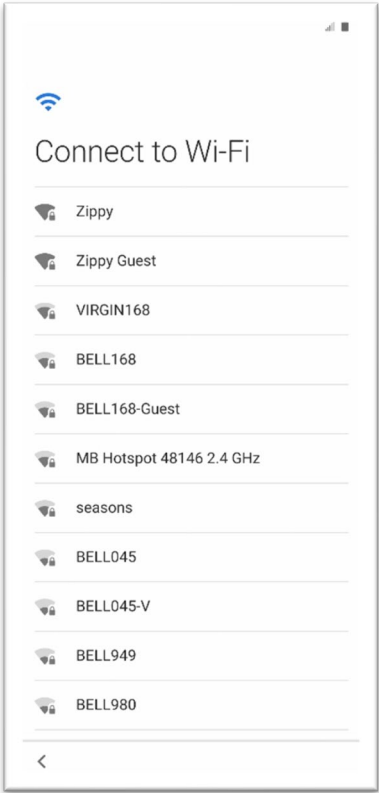

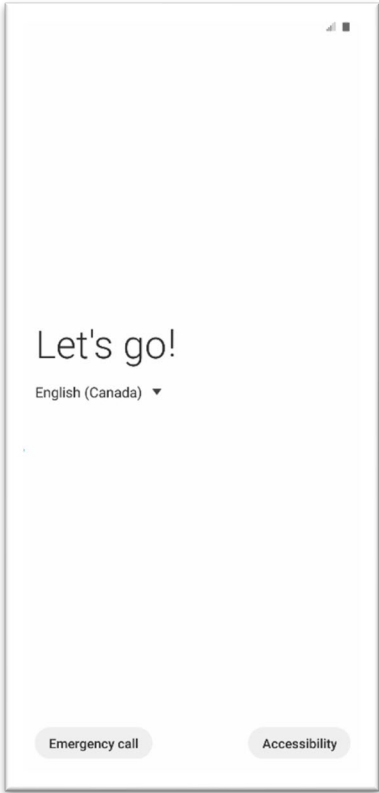

# Modern Provisioning

# Automated Device Enrollment

- Out-of-box experience (OOBE) Setup and Delivery.
  - Windows – Autopilot White Glove
  - Organizations can purchase iOS/iPadOS devices through Apple's Automated Device Enrollment (ADE). ADE lets you deploy an enrollment profile "over the air" to bring devices into management.
  - On Android 7 and newer devices, you can scan the QR code from the enrollment profile to enroll the device

# 2020 Magic Quadrant for Unified Endpoint Management

- Gartner has recognized Microsoft as a Leader in the 2020 Magic Quadrant for Unified Endpoint Management
